To Whom It May Concern:

Keiser University is important to our community for many reasons. One being they provide the professional and academic foundation for the students to meet their educational goals.

We have worked in conjunction with Keiser since 2005 by being an externship site, being on the advisory board, and have even hired a number of their graduates after their externship was completed. We are a very busy Dermatology office that opened in Tallahassee in 2002. Keiser has equipped many Medical Assistants with knowledge on real world experiences, which pays dividends when the MA go out into the working world. I would without hesitation hire a Keiser graduate.

Sincerley,
