To Whom It May Concern,

Keiser University is important to our community as it allows us to mentor their students and help them come out into the workforce after graduation. Keiser University's Radiologic Technology Program works hard to provide a foundation of educational excellence for their students and works very closely with our staff to provide feedback on their student's clinical knowledge base. Bayfront Health Brooksville has hired about ten new graduates over the past few years and each one has been exceptionally talented. As a Systems Director of Diagnostic Imaging, Keiser University helped me to obtain my Bachelor's in Imaging Sciences while still continuing to work full-time which has benefited Bayfront Health Brooksville. Our facility also offers a clinical setting to other colleges, however, Keiser University students still remain to be the most professional, organized, productive and ready for the clinical setting over other institutions. Bayfront Health Brooksville has been collaborating with Keiser University for almost 10 years and will continue the partnership to enrich the lives of our community and keep their students on the path to excellence.

Thank you,

A handwritten signature in black ink that reads "Amy Wohlleben". The signature is fluid and cursive.

Amy Wohlleben

Systems Director of Diagnostic Imaging
