

"We will glorify God by being a witness for life, promoting purity, protecting the unborn and offering support to families."

March 8, 2022

To Whom It May Concern,

I am a member of the Keiser University Advisory Board because I feel that my many years of healthcare experience can be beneficial in the design and function of the Diagnostic Medical Sonography curriculum at Keiser.

Keiser University is important to our organization and community for the development of future sonographers and/or professional staff. The community can only benefit from more educated and professional members that are moving in a positive direction towards successful careers.

The Keiser University's DMS faculty partner with our organization for the placement of students during clinical rotations. Information has been provided in regard to the University's mission, vision, and opportunities available to our organization for training and facility access. It is clear that the faculty desires to foster strong partnerships with the area healthcare agencies. By requesting our inclusion as advisory board members and obtaining our input to better reflect today's healthcare challenges and seeking what skills the ideal candidate should possess, will better prepare their students for a future in the sonography profession.

Keiser University is on the right track, and I look forward to continually working with them in the future.

Kind Regards,

A handwritten signature in blue ink that reads "April Beck" with a long, sweeping horizontal line extending to the right.

April Beck,
Executive Director
Oasis Pregnancy Care Centers
